

# GROUNDFIX®

The soil in your garden contains many nutrients, which could benefit your plants, if only the plants could consume them. But these nutrients are part of difficultly soluble compounds: plants cannot consume them as they are, and need microorganisms to do this.

**GROUNDFIX® is a PK-mobilizer and N-fixator: it solubilizes phosphorus and potassium in the soil and fixes nitrogen from the air, thus offering a safe and economical source of NPK, instead of or in addition to NPK-fertilizers.**

- Fully organic NPK-nutrition
- Reduced NPK fertilizers application rate, because more nutrients are consumed from soil
- Boosted growth and development due to phytohormones, amino acids and other beneficial substances released by bacteria
- Healthier soil, better prepared for future yields

We comply with Regulations EU No.834/2007 and No. 889/2007 via Organic Standard  
Listed in the Input list for organic farming in Germany  
Austria registration number: BAES-DMT-2021-0075-03

# GROUNDFIX®

Application rates and product combinations we recommend are based on our many years of laboratory tests and field trials, where we analyze how products perform compared to the traditional technology of the farm.

### Active ingredients:

strains of *Bacillus*, *Azotobacter*, *Enterobacter*, *Paenibacillus* (titer not less than  $0,5-1,5 \times 10^9$  CFU/ml).

### Application method and rates in horticulture.

Apply for fertigation 2-5 l per hectare, 2-3 times during the season. Add water in the corresponding application norm. The working solution of the preparation should be prepared before the treatment and used within 4 hours.

For fertigation, we recommend to combine GROUNDFIX® with MYCOHELP® for increased nutrients absorption via root zone and stimulation of root system development.
