

# MycoFriend®

The amount of nutrients and water consumed via the root of the plant depends on the area of consumption: the better developed is the root, the more the plant can consume. Mycorrhiza is a symbiotic association of fungi mycellium with plant root, which increases the root's absorption capabilities.

**MYCOFRIEND® contains a complex of mycorrhiza-stimulating microorganisms. They promote the formation of a beneficial mycorrhiza network in the root zone, which transfers difficultly soluble soil phosphates into consumable form and delivers nitrogen, phosphorus, calcium, potassium and other nutrients to the root zone.**

- Increased absorption area in the root zone
- Seed germination improvement
- Improved uniformity and vitality of seedlings
- Balanced plant nutrition

We comply with Regulations EU No.834/2007 and No. 889/2007 via Organic Standard  
Listed in the Input list for organic farming in Germany  
Austria registration number: BAES-DMT-2020-0485-03

# MycoFriend®

Application rates and product combinations we recommend are based on our many years of laboratory tests and field trials, where we analyze how products perform compared to the traditional technology of the farm.

**Active ingredients:** Mycorrhiza fungi, rhizosphere-colonizing and phosphate mobilizing bacteria: strains of *Glomus*, *Trichoderma*, *Streptomyces*, *Pseudomonas*, *Bacillus* and *Enterobacter* (titer not less than  $1,0-1,5 \times 10^8$  CFU/ml).

## Application method and rates in horticulture.

Apply for seed treatment, row fertilization, fertigation, treatment of seedlings.

	Seed treatment		Row fertilization, fertigation, l/ha		Seedling treatment, l/1000 pcs	
	MYCOFRIEND®, ml/kg	Working solution, l/kg	MYCOFRIEND®, l/ha	Working solution, l/ha	MYCOFRIEND®, l/1000 pcs	Working solution, l/1000 pcs
Vegetables	20-30	0,7-1,0	0,5-1,0	Water application rate	0,2-0,5	20-50
Horticultural	—	—	1,0-2,0		—	—
